PROJECTS

FaceBork (Rails, PostgreSQL, React, Redux)   Live   Github

A full-stack, single page social network for dogs. Inspired by Facebook.

- Optimized speed by enabling front end search, populating Redux State on profile fetch
- Hosted profile and cover photos in the cloud with AWS and Paperclip
- One way friend requests using backend logic "in-friends" and "out-friends"

Vincent Van Grow (JavaScript, HTML/CSS, D3)   Live   Github

An algorithm site creating beautiful voronoi diagrams from self implemented sampling algorithms

- Implemented three sampling algorithms including Poisson-Disc in $O(n)$
- Utilizes D3 to create voronoi mosaics in real time as the sampling algorithms run
- Uses Vanilla JavaScript and HTML to translate sample data/voronoi shapes to Canvas

HermesORM (Ruby, PostgreSQL)   Github

ORM framework using a preconfigured base class model and metaprogramming techniques

- Utilzes sensible defaults for broad coverage under conventional naming standards
- Streamlines setup of new model classes with Ruby's define method metaprogramming
- Allows models to connect to other models, minimizing database queries
